**BALLARIO & FORESTELLO**  
CONSTRUZIONI MECCANICHE

## *Electric & Petrol Log Splitters - For All Your Firewood Needs*

**WOODY** log splitters are powered by electric or petrol motors driving a hydraulic system specially designed for home and commercial use. Compact, powerful, easy to handle and comfortable to use, these units are the perfect solution for those who want the option of splitting their own wood to any size.

**WOODY** is perfectly safe for the whole family to use because of its **two-handed operating system**. Computer design has enabled the unit to be built with a limited number of parts, thus reducing maintenance to a minimum. The small size and attached wheels make these log-splitters easy to move around and store.

**WOODY** has been skilfully designed and engineered by Ballario and Forestello, an established Italian engineering company focused on manufacturing high quality and reliable specialist machinery for 25 years.

**WOODY** is built to quality standards and will not suffer from structural problems such as bending and flexing as experienced on inferior quality products.
